

Imagine'14 - A Micro-SFP Competition (just for fun!)

We cordially invite you to write a very short story, proposing a new type of product related to intelligent environments technology or an interesting application of *Jimmy*¹, Intel's Crowd Sourced robot project. The challenge is to describe and motivate your idea in a short story of 25 words, or less (a genre of SFP that called a *Micro Science-Fiction Prototype* or *Micro-SFP* for short). Generally there are three components to such a story; the <u>technology</u>, a simple <u>action</u> and a <u>person</u>. It is difficult to convey an idea in just 25 words, so don't treat this like an examination or a paper, it's supposed to be quick and fun! Intel has kindly donated 10 copies of their book "*The Tomorrow Project Anthology*" plus 3 miniature 3D printed '*Jimmy's*' which will be awarded to the writers of the best micro-SFP relating to Intel's *Jimmy* crowd sourced robot. If you want to take part then submit your entry to the IE'14 front desk by no later than midday on the 3rd of July 2014! More information on writing Micro-SFPs is available for our website at: http://www.creative-science.org/activities/microsfp/
